ABSTRACT

Il trattamento delle CLP prevede, oltre alla fase chirurgica di chiusura della schisi, la programmazione individuale mirata alla riabilitazione di un sorriso il più naturale possibile.

In questo ambito collaborano tre figure professionali: il chirurgo maxillo-facciale, l'ortodontista e il protesista dentale estetico. Nello specifico è di fondamentale importanza la coordinazione tra ortodonzista e odontoiatra estetico al fine di pre-visualizzare congiuntamente il risultato finale.

La fase ortodontica, spesso gravata da anomalie dentarie di forma, di posizione e di numero viene compatibilmente con i limiti imposti dalla situazione clinica pre esistente, protesicamente ed esteticamente guidata.

L'obiettivo finale è quello di concludere l'iter ortodontico con un restauro dentale in grado di ridare un sorriso accettabile in modo conservativo, veloce ed atraumatco, evitando di gravare ulteriormente sulle compliance dei nostri pazienti già stanchi e provati da un lungo percorso terapeutico.

ABSTRACT

THE COORDINATION BETWEEN ORTHODONTICS, PROSTHODONTICS AND AESTHETIC DENTISTRY IN CLP

Cleft Lip and Palate treatment involves, in addition to the surgical phase for closing the cleft, a custom clinical rehabilitation in order to obtain a smile as natural as possible. Three professional figures collaborate in this context: the maxillofacial surgeon, the orthodontist and the aesthetic and prosthetic dentist.

The coordination between the orthodontist and the aesthetic dentist is of fundamental importance in order to pre-visualize the final result. The orthodontic phase, often burdened by dental anomalies in shape, position, and number, is guided prosthetically and aesthetically, considering the limits imposed by the pre-existing clinical situation. The ultimate goal is to conclude the orthodontic process with a dental restoration capable of restoring an acceptable smile in a conservative, quick, and atraumatic manner, avoiding further burden on the compliance of our patients who are already tired and strained from a long therapeutic journey.
